

order different from the order illustrated in the flowcharts, or can also be processed in parallel.

**[0136]** Further, the effects described in this specification are merely illustrative or exemplified effects, and are not limitative. That is, with or in the place of the above effects, the technology according to the present disclosure may achieve other effects that are clear to those skilled in the art from the description of this specification.

**[0137]** Additionally, the present technology may also be configured as below.

(1)

**[0138]** An information processing device including:

**[0139]** a comparison unit configured to compare first sound-related information obtained from collected first utterance information with second sound-related information obtained from collected second utterance information; and

**[0140]** a setting unit configured to set a new delimiter position different from a result of speech-to-text conversion associated with the first utterance information on a basis of a comparison result obtained by the comparison unit.

(2)

**[0141]** The information processing device according to (1), further including:

**[0142]** a conversion unit configured to perform speech-to-text conversion on a basis of the new delimiter position.

(3)

**[0143]** The information processing device according to (2),

**[0144]** in which the conversion unit performs speech-to-text conversion associated with the second utterance information on the basis of the new delimiter position.

(4)

**[0145]** The information processing device according to (2) or (3),

**[0146]** in which the conversion unit performs the speech-to-text conversion associated with the first utterance information on the basis of the new delimiter position.

(5)

**[0147]** The information processing device according to any of (1) to (4), further including:

**[0148]** a reception unit configured to receive the first utterance information and the second utterance information.

(6)

**[0149]** The information processing device according to (5),

**[0150]** in which the reception unit receives target information used to specify the first utterance information, and

**[0151]** the comparison unit compares the first sound-related information with the second sound-related information on a basis of the target information.

(7)

**[0152]** The information processing device according to any of (1) to (6), further including:

**[0153]** a transmission unit configured to transmit information regarding the new delimiter position set by the setting unit.

(8)

**[0154]** The information processing device according to (7),

**[0155]** in which the transmission unit transmits a result of the speech-to-text conversion based on the new delimiter position.

(9)

**[0156]** The information processing device according to any of (1) to (8), further including:

**[0157]** a speech recognition unit configured to perform speech recognition on a basis of the first utterance information or the second utterance information.

(10)

**[0158]** An information processing device including:

**[0159]** a reception unit configured to receive information regarding a new delimiter position different from a result of speech-to-text conversion associated with collected first utterance information; and

**[0160]** an output control unit configured to control output of a new conversion result obtained by performing speech-to-text conversion on a basis of the new delimiter position,

**[0161]** in which the new delimiter position is set on a basis of a result obtained by comparing first sound-related information obtained from the collected first utterance information with second sound-related information obtained from collected second utterance information.

(11)

**[0162]** The information processing device according to (10),

**[0163]** in which the output control unit causes an output unit to output the new conversion result and the new delimiter position in association with each other.

(12)

**[0164]** The information processing device according to (10) or (11), further including:

**[0165]** a transmission unit configured to transmit the first utterance information and the second utterance information.

(13)

**[0166]** The information processing device according to (12),

**[0167]** in which the transmission unit transmits target information used to specify the first utterance information, and

**[0168]** the reception unit receives information regarding the new delimiter position set on a basis of the target information.

(14)

**[0169]** The information processing device according to any of (10) to (13),

**[0170]** in which the reception unit receives the new conversion result.

(15)

**[0171]** The information processing device according to any of (10) to (13), further including:

**[0172]** a conversion unit configured to perform the speech-to-text conversion on the basis of the new delimiter position.

(16)

**[0173]** The information processing device according to (13), further including:

**[0174]** an operation acquisition unit configured to detect an input operation by a user and generate the target information on a basis of the input operation.

(17)

**[0175]** The information processing device according to any of (10) to (16), further including:

**[0176]** an output unit to output the new conversion result on a basis of control by the output control unit.
